

Project Tasks Weeks 18ff

Smart Sensor Network Systems Project

Prof. Dr. Matthias F. Wagner
Research Group WSN IoT DS
Summer Semester 2021

This week we start with the project! This complete coursework is intended to help you developing your group's system.

Next steps:

The basic specification of your system must be researched.

1. For next project meeting prepare a detailed *Project Plan* for our practical term project! (Remember your Software Engineering and Safety Critical Systems lectures!) It should contain:
 - Detailed proposal for your system
 - Project organization
 - Team organization
 - Task distribution in the team: Who is doing what in detail!
 - Plan for requirements management, especially how to gather information about the application field!
 - Get an idea of possible Use Cases!
 - Schedule with milestones
 - Risks to the project
 - Software Configuration Management for the software
 - ... (Whatever else makes sense!)
2. Please prepare a proposal document per group according to the rules!
3. Please prepare a presentation per group!
